Assembly Tips

- 1.If the product has an external adjustable potentiometer, please adjust the current, it is recommended to use 704 silicone to adjust the current of the potentiometer. Seal the hole of adjusting current with 704 silicone and cover it with waterproof rubber plug.
- 2.When the dimmer line is not in use, please seal the connector of the dimmer line with insulating sleeve, so as not to string into the interfering signals and cause damage to the dimmer line, affecting the power supply. dimming line damage, affecting the normal operation of the power supply.
- 3.The trace routing on aluminum substrates is designed in compliance with creepage distance requirements specified by relevant certification regulations.
- 4.The creepage distance between LED+ and LED- on the aluminum substrate is designed in compliance with the relevant certification regulations.
5. aluminum substrate to minimize the laying of copper area, reduce junction capacitance, reduce leakage current.
6. LED lamp bead arrangement is recommended first and then string.
7. LED light board insulation level should meet the reliability design requirements.
- 8.other notes, please refer to the “LED driver power supply instruction manual”.

Warning

Insufficient or compromised insulation voltage resistance in LED light panels may cause breakdown and short circuits to earth, resulting in damage to the luminaire and LED driver, and posing significant safety hazards. It is recommended to install a residual current device (RCD) during application.
