- NOTE:
1. SOSEN warrants the LED Driver itself complies with EMC standard. However, LED Driver's EMC should be re-checked when integrated into lighting systems due to unexpected interference as component.
 2. During the withstand voltage test, the input and output wires are shorted together to withstand voltage to ground.
 3. When hitting the withstand voltage to ground, it is necessary to short the input and output wires together.

Constant Lumen Output

Constant Lumen Output are design to maintain fixture's stable output lumen by increasing driver's output current within driver's life span to counteract LED lumen degradation.

Programming connection diagram:

Legacy Timer: Driver's O/P follows the pre-programmed timing curve after turn-on.

Auto-Adjust by Percentage: Driver's O/P will be adjusted by automatically changed dimming curve by the period percentage based on the latest 5 dimming curve.

Auto-Adjust by Mid-point: Driver's O/P will be adjusted by automatically changed dimming curve by mid-point based on the latest 5 dimming curve.

Note:

Programming could be completed by off-line mode either without turn on the driver or without PC, other than the traditional on-line mode.

Assembly Tips

1. Please take isolation and waterproof measures if the dimming cable is not in use.
2. Safety space between aluminum base and LED coppers >5mm.
3. Safety space/coppers between LED+ and LED- ≥ 3.6 mm.
4. Minimize the copper area on the aluminum PCB to reduce parasitic capacitance and leakage current.
5. The insulation level of LED light panels should meet the reliability design requirements.
6. For other precautions, please refer to the "LED Driver User Manual".
7. It's recommended to add resistors or capacitors in parallel with the LED on PCB to reduce the risk of surge when a non isolated LED driver is used for the luminaire
8. It is recommended to design LED beads in parallel first and then in series.
